

Using the Class Roster

Support Materials

Class Roster

The Class Roster provides essential information about completed MEDIC FIRST AID® Training Programs. It is a quality assurance tool that allows for verification of student participation. The Instructor fills out the information, and submits the Roster to the Training Center that is responsible for the class.

Specific First Aid Topics and Optional First Aid Skills presented in a training class must be documented on the back of the Class Roster. Instructors should initial each additional topic or skill covered in the class on the checklist provided.

A MEDIC FIRST AID approved company roster may be used as a substitute to this roster. If you wish to use your own company roster, submit a copy to your client service representative and it will be approved or suggestions for change will be made.

Instructor Note

You may duplicate these forms for classroom use.
